Cybercom and MTV agree upon Amazon Web Services (AWS) partnership

Finland's leading media company, MTV, has selected Cybercom's Passionate Support for AWS services as a development and maintenance solution for its cloud platform. The agreement will remain indefinitely and includes 24/7 on-call services, infrastructure and architecture design of AWS environments, and implementation.

"Thanks to Cybercom's comprehensive expertise in cloud platforms, we are able to focus more of our resources on developing new electronic services, which is our core business. Cybercom's experience and reliability as a provider of support services were instrumental factors in our decision," says Risto Koivula, CTO, MTV Corporation.

MTV is a Finnish media company that provides news, entertainment and experiences 24 hours a day. Everyone in Finland is familiar with the MTV3, Sub and AVA TV channels. MTV Katsomo is an online TV service that enables viewers to watch programmes from MTV's channels. Subscription TV content is available from telecoms operators that sell the MTV Total, MTV Total Sport and C More packages. The online C More service also provides access to films and TV series. Mtv.fi serves consumers online.

"The agreement with MTV is the latest chapter in the success story of our Passionate Support for AWS service. The functionality of Cybercom's long-term client strategy and collaboration based on partnership played a key role in the agreement struck with MTV. I am very pleased that our collaboration will expand to cover the AWS cloud environment," says Tapio Koivisto, Director Managed Services, Cybercom.

Amazon Web Services is one of Cybercom's key cloud partners. Cybercom is an AWS Advanced Consulting Partner and an official retailer in the Nordic region in the public and private sectors.
