Cybercom wins Finnish Customs' tender competition for expert services in testing

Cybercom has won the tender for Finnish Customs' expert services in testing which the Customs put out to tender through the framework agreement of Hansel's IT consulting. The agreement will be valid until 31 May 2021 and will employ from 3 to 5 experts at a time.

Customs has several development projects going on over the next few years. These projects include the comprehensive reform of customs clearance (UTU), development of management and control of tasks and resources (TERHO), and high availability (24/7). The successful implementation of these projects also requires development of testing.

"Thanks to our newly established cooperation with Cybercom, we will be able to ensure sufficient competence and availability of resources for our projects. Cybercom's expertise and experience in testing will help us respond to the changing testing needs and to develop testing services," says Sanna Qvist, Head of Testing at Finnish Customs.

Cybercom is the government's framework agreement supplier in all seven areas of IT consultation. Cybercom is actively involved in developing digital services for the public sector – services which affect every Finn.

"Customs is one of our new clients. It is great to be involved in developing testing operations at Customs in cooperation with their experts. Our strong technical software development expertise and testing experience enable us to support testing at Customs. Our collaboration with Customs will further strengthen our expertise in developing digital services for the public sector," says Veli-Matti Nurminen, Head of Cybercom Finland.
